Today's enterprises are **HYPER-DISTRIBUTED**

Applications are distributed
everywhere

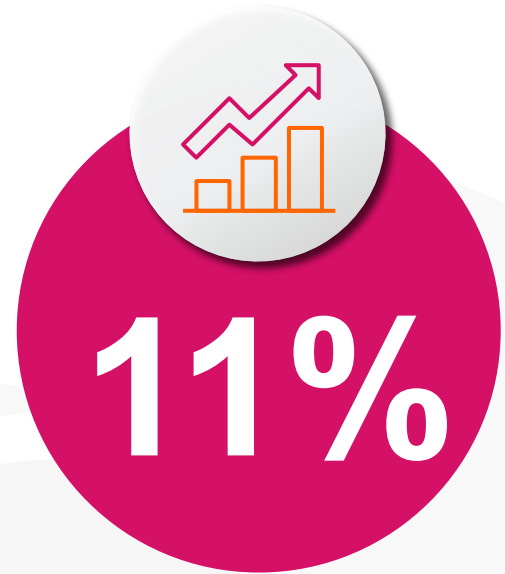

Remote user access
is the new normal

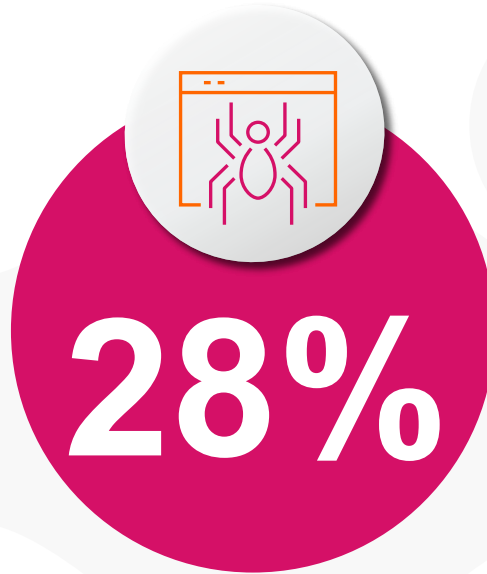

Branches using SD-WAN
connectivity

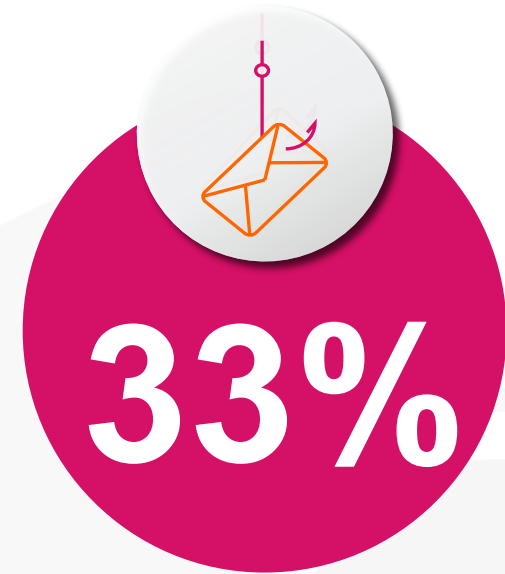

Your Endpoint Security is Failing

Increase in security breaches

Breaches involving malware

Breaches involving social attacks

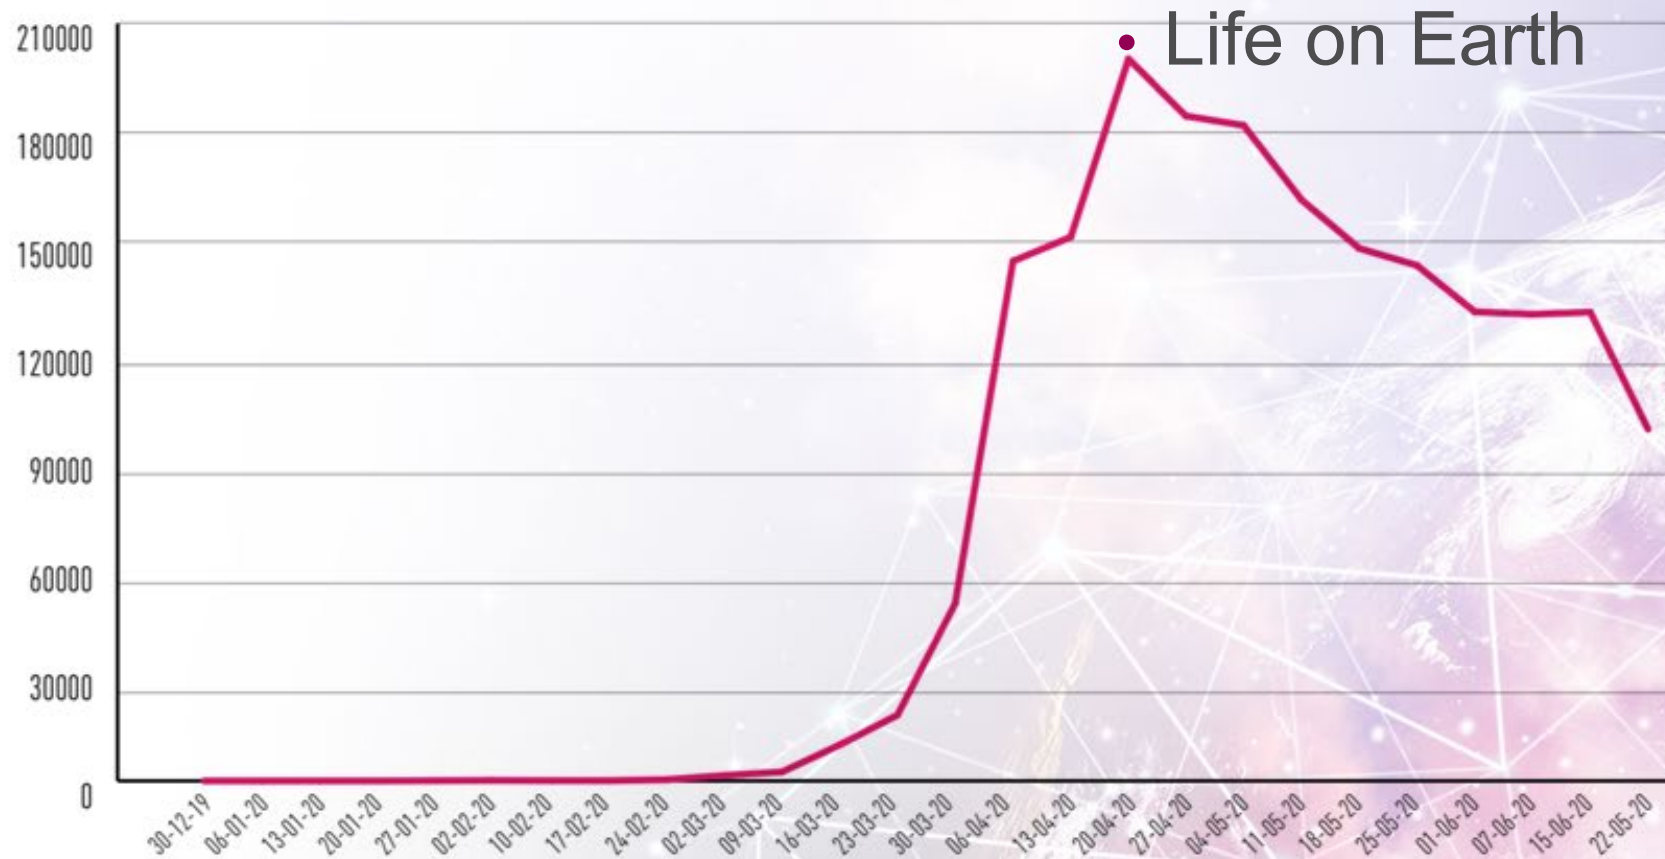

**ALL OF THIS HAPPENED IN SPITE OF HAVING
ENDPOINT SECURITY IN PLACE**

Ninth Annual Cost of Cybercrime Study*

Life on Earth has gone online – Hackers followed

Weekly Coronavirus Related Cyber Attacks

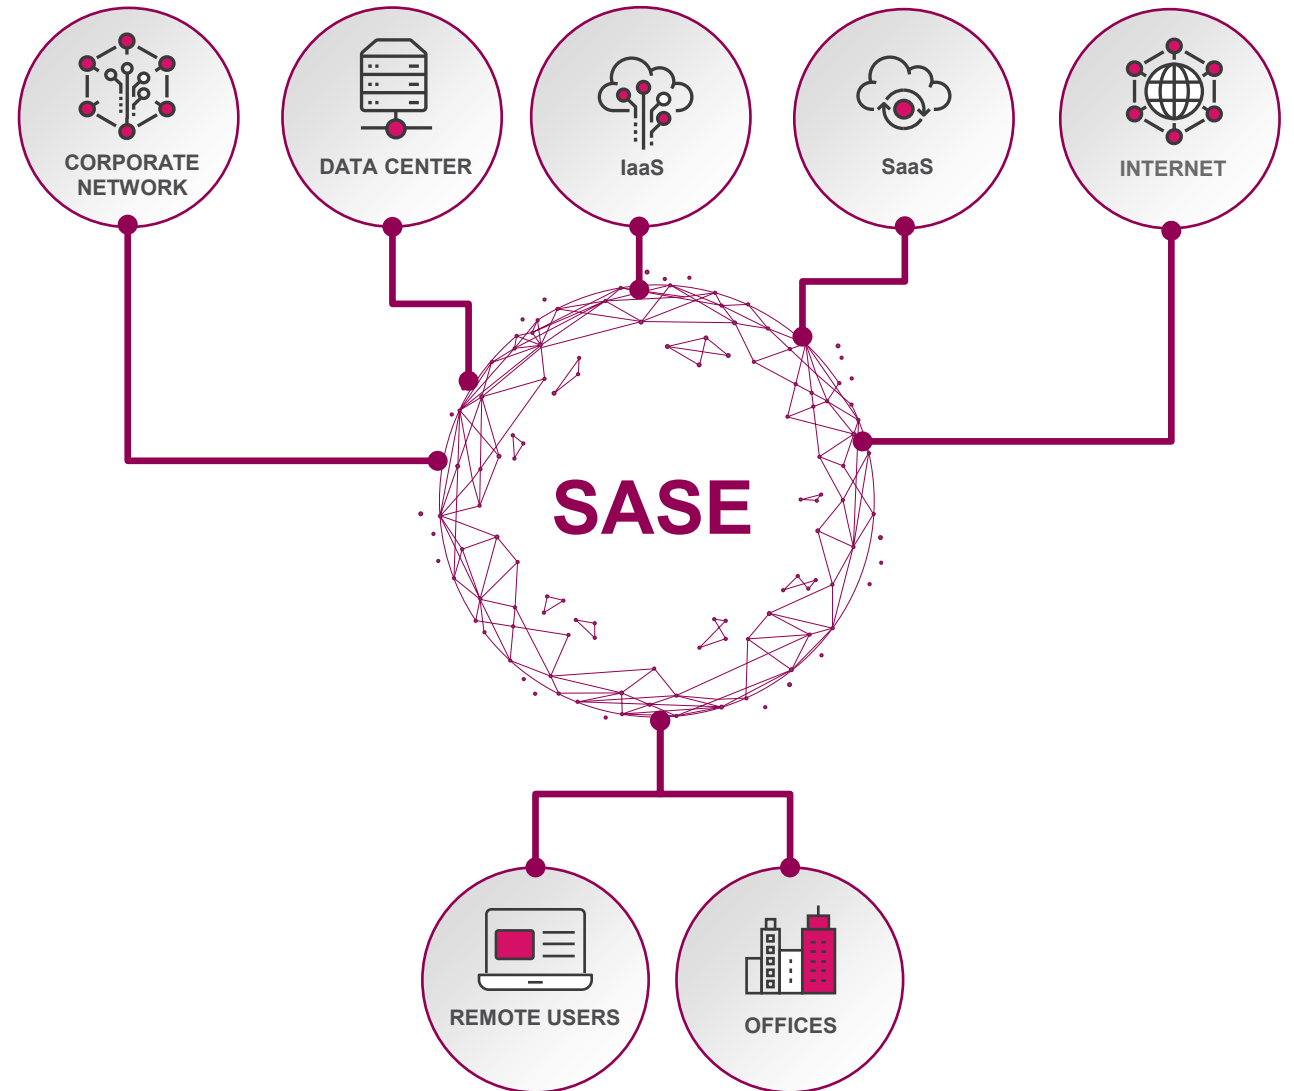

The graph represents all coronavirus-related attacks, detected by Check Point's [Threat Prevention](#) technologies across networks, endpoints and mobile devices

How do you secure the distributed enterprise?

WHY ENTERPRISES OF ALL SIZES ARE MOVING TO SASE

- Protect **remote users** and **offices**
- Secure connectivity to **applications**
- Consolidate **networking** and **security**
- Consume **security-as-a-service**

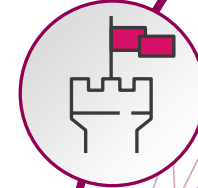

5 PRINCIPLES FOR A SUCCESSFUL SASE IMPLEMENTATION

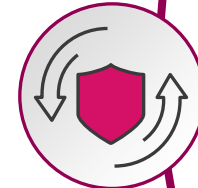

Uncompromising security for users, branches and applications

Built to prevent the most advanced threats

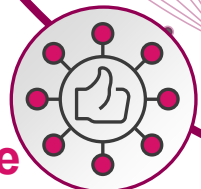

Unified security policy and services

Aligns with **zero trust** access principles

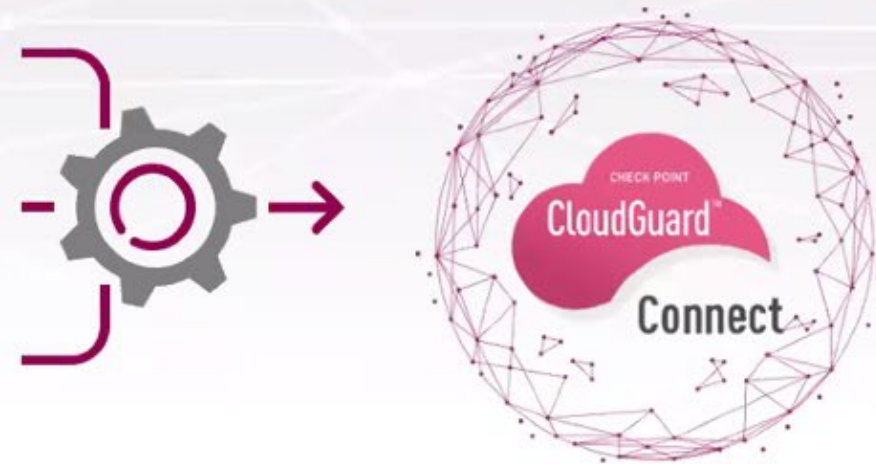

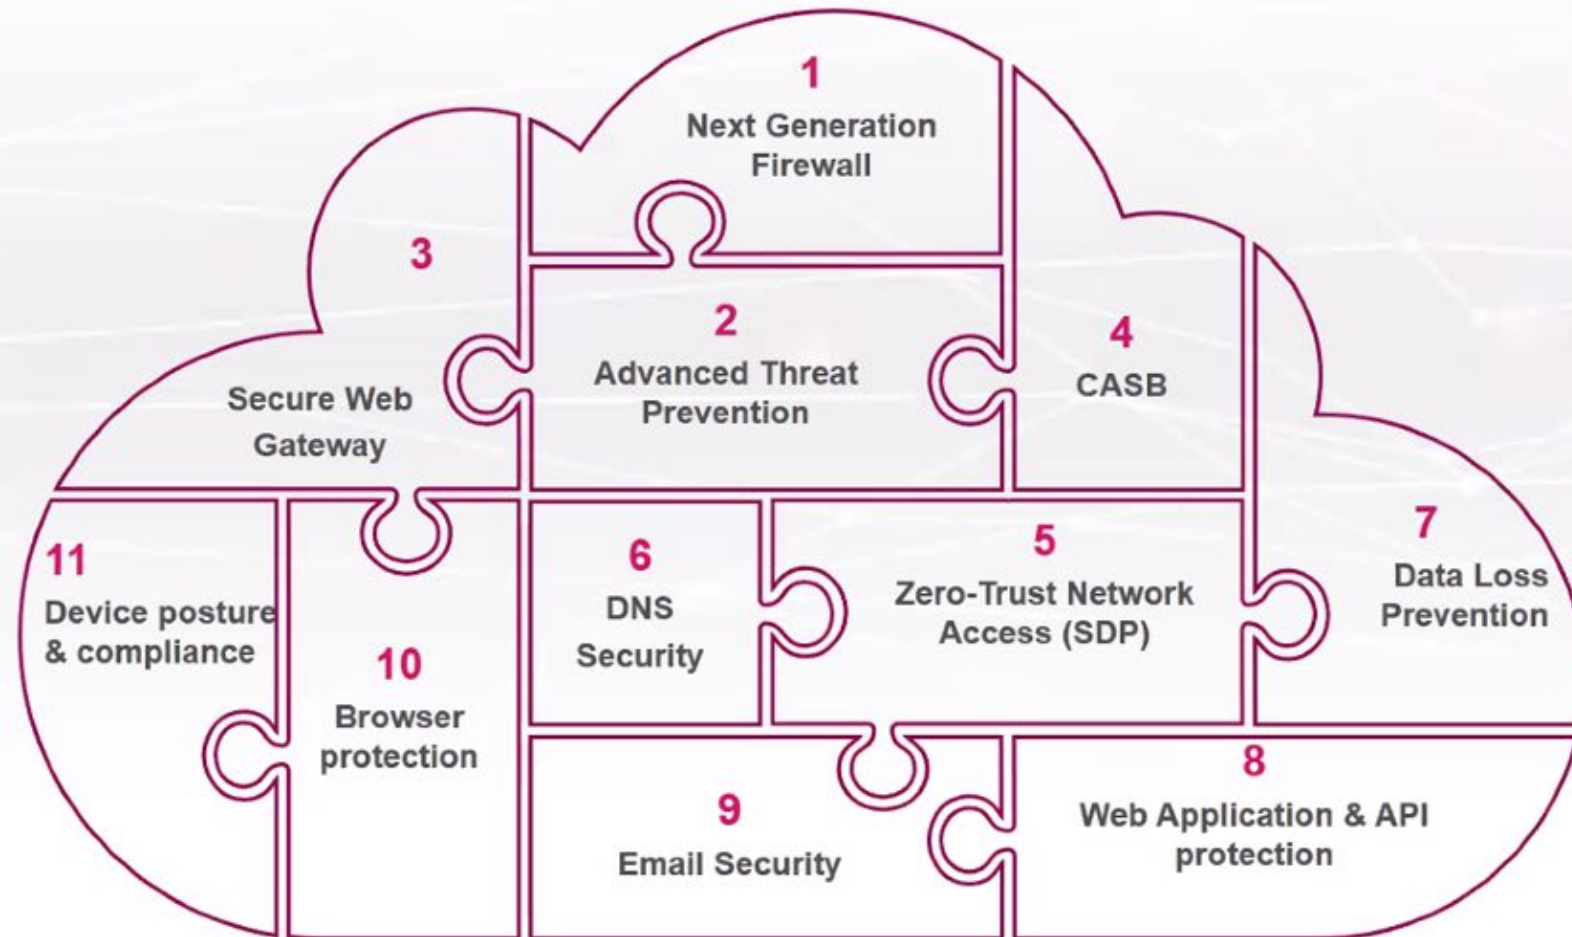

Seamless user experience with **excellent networking performance**

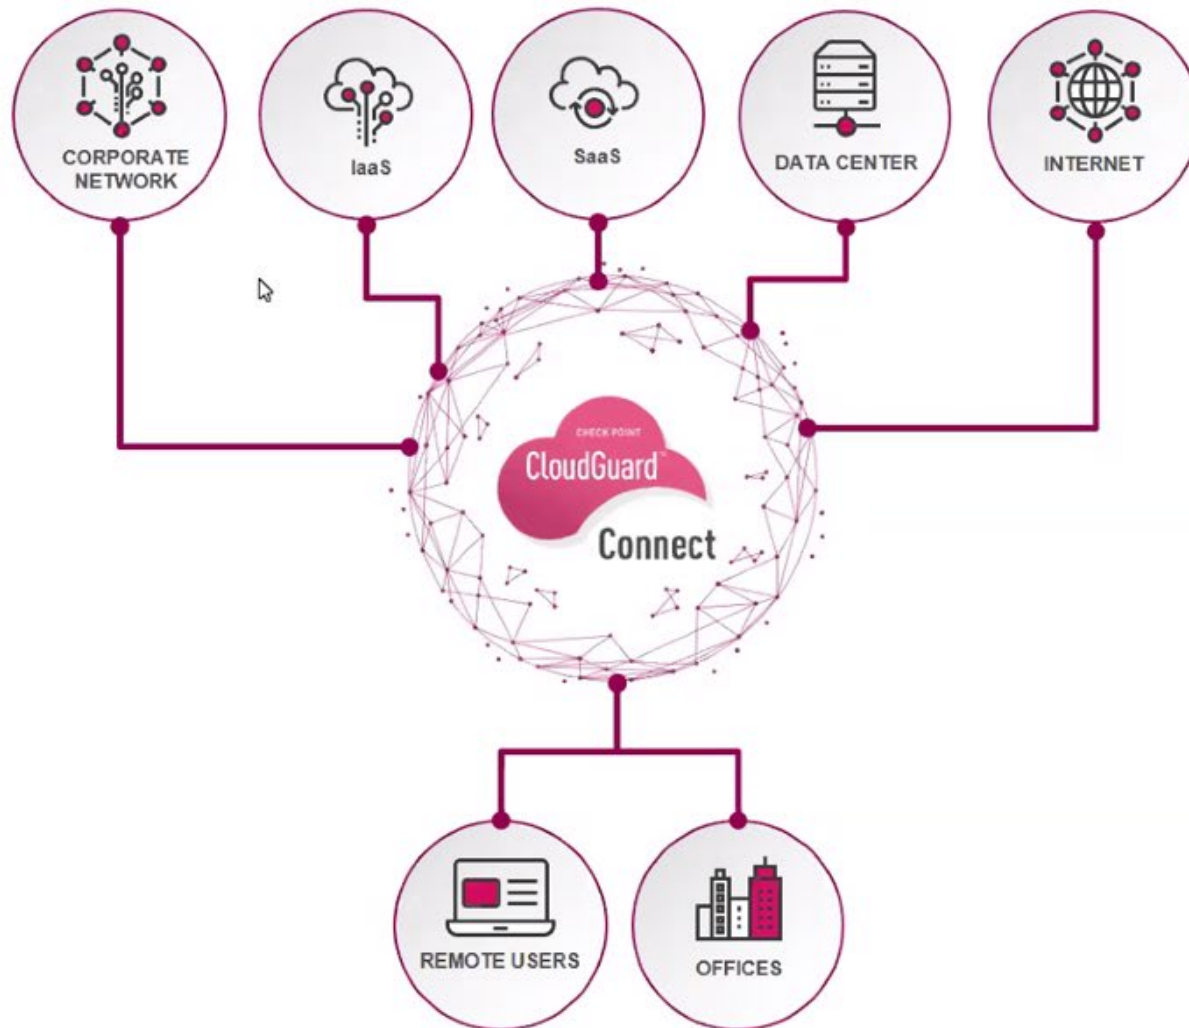

Successful SASE Implementation

UNIFYING 11 CLOUD SECURITY SERVICES

Consolidate 11 Technologies

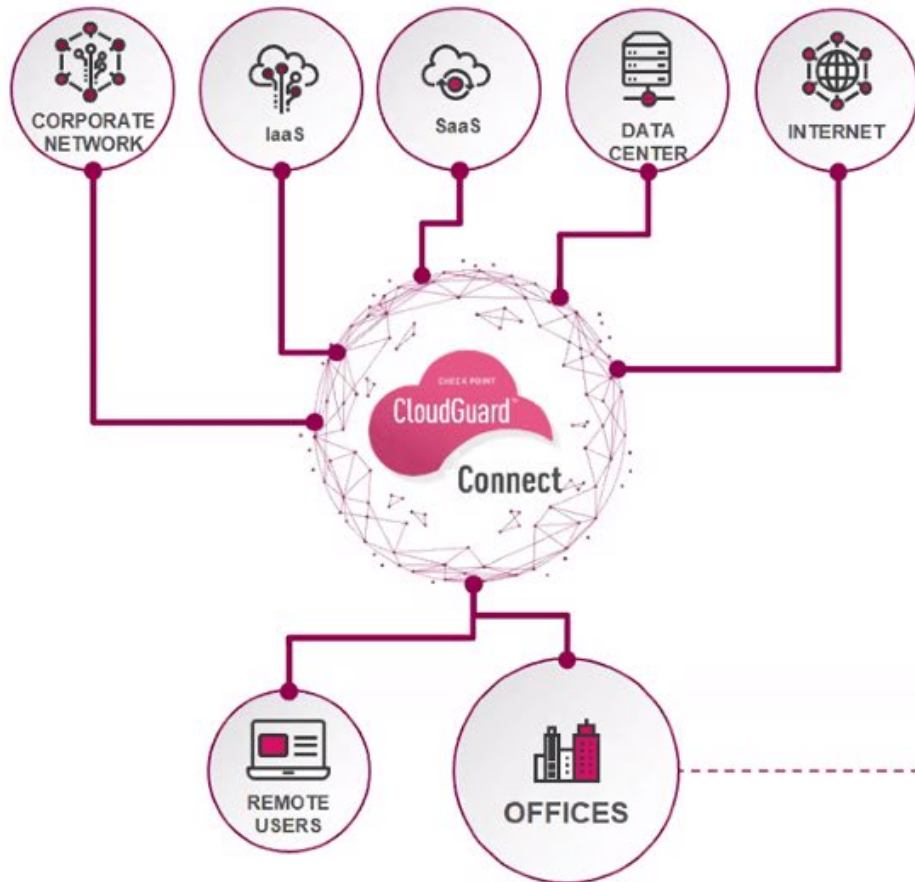

CloudGuard Connect

1. Advanced Threat Prevention
2. ZeroTrust(SDP)
3. Web Security
4. Browser Protection
5. Device posture and compliance
6. DLP
7. DNS Security
8. SD-WAN Native Connectivity
9. Any to Any connect
10. WAN Optimization
11. Email & Office Security

Best Branch Office Connectivity

- Single click branch office SD-WAN security
- Native and API integration with SD-WAN devices
